

Goal: To identify groups and permissions

Do Now: What happens when you try to save a “Read Only “ document?
What happens when you try to save a document to the group folder?
Why do you think this happens?

Click once on a file in your account.

- Click > File > Get Info or use Command I
- Close all the drop down menus in the window except the bottom one “Sharing & Permissions”

Under “Name” What three Names appear?
Each of the names will fit in, in the chart below.
Fill in the chart.

	Owner	
	Group	
	Everyone	

Directory

Click once on a folder/directory in your account. (Phase II folder for example)

- Click > File > Get Info or use Command I
- Close all the drop down menus in the window except the bottom one “Sharing & Permissions”

What privileges does each member under name have?

		Name	Privilege
	Owner		
	Group		
	Everyone		

Create a folder called “Permissions”, inside that folder create for four folders and name them as follows:

- ReadOnly
- WriteOnly
- ReadWrite
- NoAccess

Click Once on each folder and then click

File > Get Info (command I ). Open the sharing tab and set the permissions for everyone to match the name of the folder)
